	SLX BL-M675-B XT BL-M785-B Zee BL-M640-B Saint BL-M820-B	BikeYoke I-Spec B adapter

COMPATIBILITY

Generally speaking, one of our Triggy remotes should be first choice.

Only, if you already have a shifter or another remote on your handlebar left side you may need to go with our **2-by Remote** remote, which can be mounted left or right side and is a „push-down“ style remote.

For Triggy there are a couple of variants to choose from:

Triggy - the classic one

Triggy X - slightly longer than Triggy and with adjustable paddle length

Triggy Alpha - our top-end remote with ball bearing and angle adjustment - available in two paddle lengths short and long

Triggy and **Triggy Alpha short** give a more crisp and direct lever feel, which we prefer for the REVIVE series.

Triggy X and **Triggy Alpha long** provide a softer lever feel.

Only for posts of the DIVINE family (which have higher operating pressures) we recommend the longer Triggy X or Triggy Alpha long - the choice is yours though. All our remotes will work with all of our posts.

You can find a table of recommendation below.

Triggys are always mounted left side under the handlebar, similar to your derailleur shifter on the right side.

You can mount them via our BikeYoke Splits clamp on the handlebar or you can bolt them directly to your brake lever with a small adapter to save the extra clamp and keep your cockpit clean.

An overview of compatible brakes and adapters can be found below.

For Shimano brakes we offer our own BikeYoke I-Spec adapters and for other brands you will find adapters from your brake manufacturer directly.
